Job Application for Data Center / IT Infrastructure Engineer

Dear Hiring Manager,

About Me

I am writing to express my strong interest in the Data Center and IT Infrastructure Engineer position. With over 9 years of experience in financial trading environments and a Ph.D. in Media and Governance from Keio University specializing in peer-to-peer network topologies and content delivery systems, I bring a solid combination of deep technical understanding and operational excellence in high-availability, low-latency infrastructure.

Professional Background & Key Strengths

Throughout my tenure at Japannext Co., Ltd. as Data Center Engineer (Co-Manager), I have planned, built, and optimized mission-critical datacenter and server infrastructure. My accomplishments include leading a comprehensive datacenter server migration ahead of schedule with minimal downtime, implementing rack-level PDU power monitoring to improve workload power balancing by 50%, and deploying Dell PowerScale (Isilon) enterprise storage to boost server throughput by 50%. Furthermore, I have developed automated monthly reporting and online inventory tracking systems for datacenter hardware and consumables, eliminating manual operational overhead and significantly improving capacity planning.

Why Me?

My background bridges academic research in networking and distributed systems with rigorous production operations in fast-paced financial technology settings. Highly proficient in Linux/FreeBSD operating systems, network routing, TCP/UDP protocols, and Python/Shell automation, I thrive on solving complex technical challenges and maintaining 24/7 infrastructure stability. I am eager to bring my expertise in datacenter lifecycle management, performance tuning, and infrastructure automation to your engineering team.

Sincerely,

Mohamad Dikshie Fauzie
